

Appendix 1 for Rules and Regulations of CHAIYO Massage Centre in Kraków

General characteristics of Thai massage

Thai massage is a therapeutic method that combines elements of passive yoga, deep acupressure and reflexology. Masseuse performing the massage may work not only with her hands but also wrists, forearms, elbows and feet, placing the body of her Client in selected yoga positions. Classical Thai massage covers all parts of the body and is a dry massage, although the masseuse may decide that a local application of a warming balm or oil is necessary.
